

1 ABSTRACT OF THE DISCLOSURE

2

3 A jig assembly includes a jig having an elevated first
4 portion having holes or slots to align a drill with screw
5 holes in an intramedullary portion of a fixation device,
6 and a lower second portion having openings in axial
7 alignment with holes on a plate portion of the fixation
8 device. The jig may be locked relative to the fixation
9 device. The jig assembly further includes one or more of
10 sleeves, drill guides and gauges for facilitating the
11 drilling of appropriate holes into bone both beneath and
12 above the fixation device.
